University of California
4-H Science and Technology Program of San Luis Obispo County

You should know that the SLO Scientist Youth/Adult Science Club is a project of the University of California's 4-H Youth Development Program. SLO Scientist will use information and ideas from the University of California and other land grants.

Volunteer Facilitators

Volunteers are members of our community who treasure the rewards of working with youth in this unique format. Volunteers are thoroughly trained in the investigation and hands-on nature of the activities.

Persons with special needs wishing to attend a program should contact the 4-H Office in advance
(805) 781-5943.
Efforts will be made to accommodate your special needs.

Learn to be a Scientist

Just like real scientists, you will have a chance to work with all kinds of fun, hands-on materials and activities. Perhaps you will make a stream model and watch how it works, or design new experiments and talk about your discoveries. You will be learning and using some of the important exploratory, creative and reasoning skills that scientists use every day.

Family Dynamics

The youth/adult science clubs can be a great way to spend time with a special person in your life. Research indicates that these clubs help foster positive interactions in the family. So grab your favorite adult, or if you are an adult, invite that special child, and come explore, laugh and learn together.

Teamwork

Young people and adults join a science club as a team. Each team will meet with other adventurous teams from your community to explore, examine, and uncover secrets of the world around you.

Community

Many SLO Scientists are so excited about what they have learned that they want to share their discoveries with others in their community. Your club may decide to plant trees, help people learn to compost, start a community garden or make hands-on displays for fairs. You can make a difference in your world.
